SPECTRAL CENTROID

$$f_c = \frac{\sum_k S(k) f(k)}{\sum_k S(k)}$$

SPECTRAL BANDWIDTH

$$\left(\sum_k S(k) (f(k) - f_c)^p \right)^{\frac{1}{p}}$$

SPECTRAL CONTRAST

$$Peak_k = \log \left\{ \frac{1}{\alpha N} \sum_{i=1}^{\alpha N} x'_{k,i} \right\} \quad (1)$$

$$Valley_k = \log \left\{ \frac{1}{\alpha N} \sum_{i=1}^{\alpha N} x'_{k,N-i+1} \right\} \quad (2)$$

And their difference is:

$$SC_k = Peak_k - Valley_k \quad (3)$$

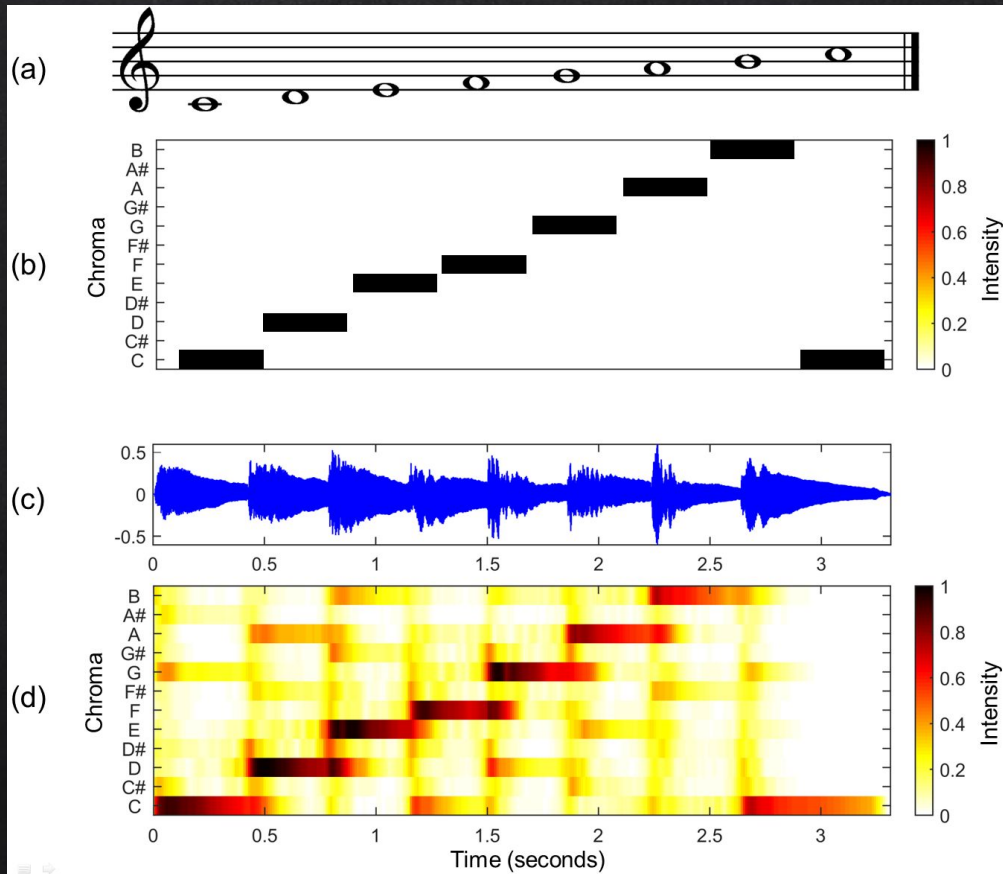

where N is total number in k -th sub-band, $k \in [1,6]$.

SPECTRAL ROLL-OFF

RBF SVC

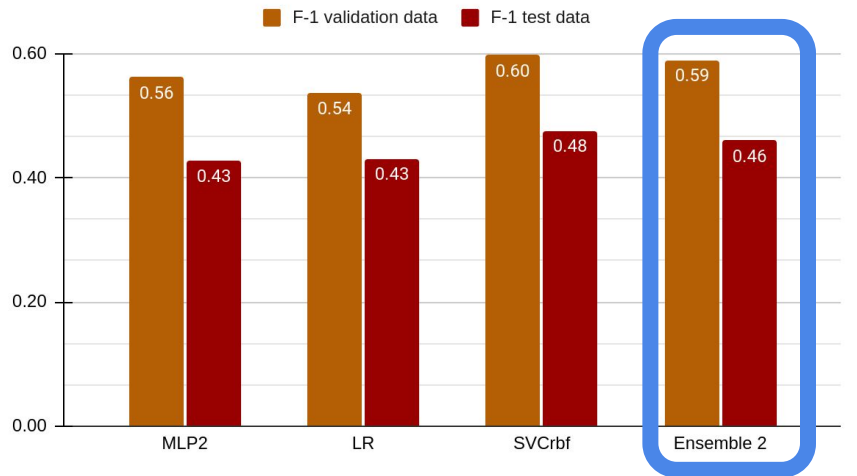

EVALUATION OF ENSEMBLE ONE / TWO

F1 PERFORMANCE

Average of 5 folds on validation/test dataset (Ensemble One)

Average of 5 folds on validation/test dataset (Ensemble Two)

CONCLUSION

WE DON'T NEED AN ENSEMBLE MODEL

CONCLUSION

WE DON'T NEED AN ENSEMBLE MODEL

OR DO WE?

AN ENSEMBLE MODEL MIGHT STILL
GENERALIZE BETTER AND OUTPERFORM RBF SVC ON
A LARGER OR DIFFERENT DATASET
